WEATHER OF CONCERN

Weather of Concern

Northern California:

- Building high pressure will bring the return of hot weather next week. Daytime highs could be 5 to 10 degrees above normal. The northern and central Sacramento valley could have high temperatures reach as high as 110 degrees, with warm overnight lows providing little relief from the heat.
- There is fire weather concern for portions of Siskiyou and Modoc Counties Sunday morning through late Sunday evening. Thunderstorms are forecast to develop late morning with the strongest and most widespread development late afternoon into early evening. Gusty thunderstorms winds could contribute to fire spread. Despite rainfall, initial attack resources could be overwhelmed and holdover fires are possible.

Southern California:

- A long duration heat wave with record-breaking temperatures is possible next week for much of Southern California. There is the potential for high heat risk mainly for interior locations including the valleys and mountains Monday through at least Thursday.
- There is fire weather concerns for portions of Santa Barbara County due to gusty northwest to north winds, low relative humidity and hot temperatures Tuesday afternoon through Thursday morning of the coming week.

WEATHER SYNOPSIS BY REGION

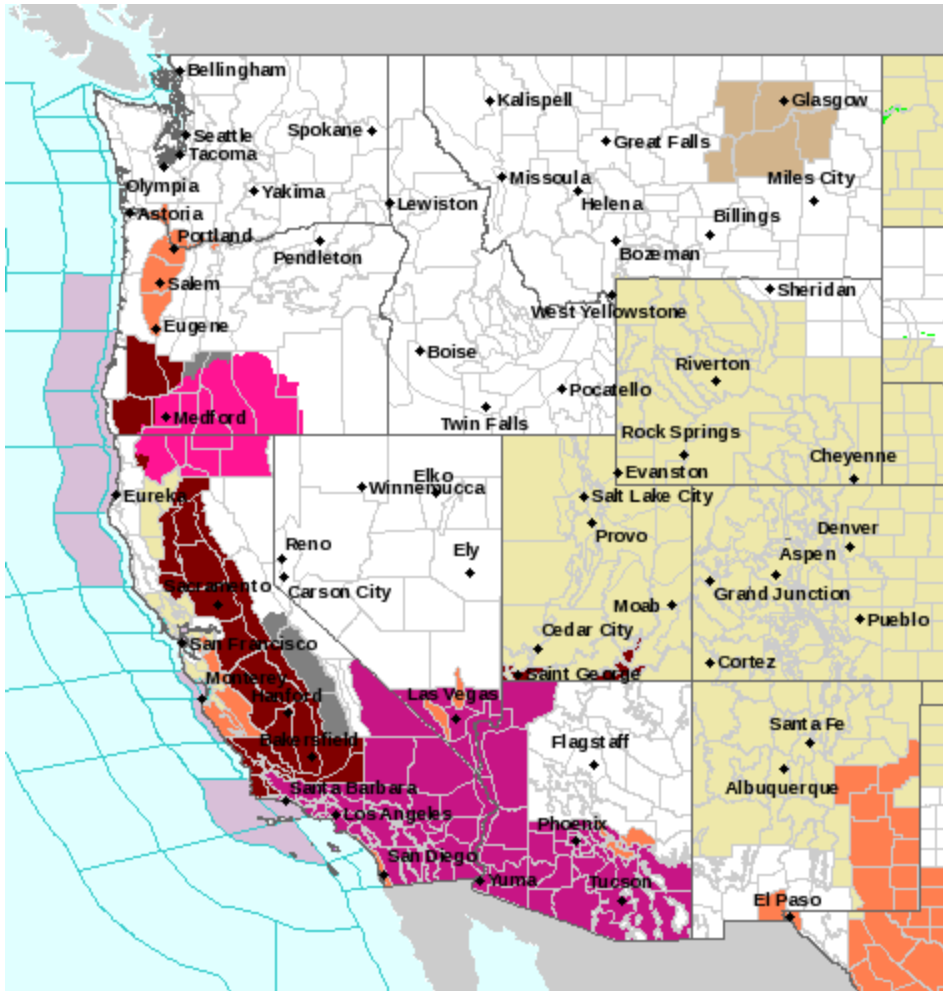

NORTHERN CALIFORNIA

Thunderstorms have formed this afternoon east of the Sierra Crest. They are producing lightning, heavy downpours and gusty winds to 40 mph. The mountains could see isolated thunderstorms in the afternoon/early evening through the weekend. Near normal temperatures and mostly sunny conditions are expected in the Valley and foothills for the remainder of the weekend, before hotter weather returns early next week. Temperatures are expected to rise again this week; Valley temperatures will range from 100 to 109 degrees by midweek.

SOUTHERN CALIFORNIA

The potential for record breaking heat continues into the long term with excessive heat watches/warnings continuing through Thursday . A ridge of high pressure is expected to gradually break down while shifting nearly overhead through Thursday before shifting northeast into the interior. This will support continued hot conditions for interior areas through Thursday before gradual cooling commences heading into next weekend. Closer to the surface, gusty and possibly advisory level Sundowner winds may continue for western portions of the Santa Barbara County South Coast into Wednesday or Thursday evening , with breezy but sub- advisory winds also possibly continuing in the Los Angeles and Ventura mountains near the I-5 corridor. Once these winds relax, models are indicating the development of a moderate eddy circulation by Thursday or Friday which could bring significant cooling and moistening of the lower atmosphere to the coastal plain, especially south of Point Conception. It may also mark the return of more widespread night to morning low clouds to these areas.
